

Air Remote

Control the shoot from the palm of your hand

1

Fast and reliable flash sync

With the Air Remote you can control multiple Profoto Air flashes directly from your camera. You can control an endless number of lights in up to 6 groups from up to 300 m (1,000 ft) away. Say goodbye to cables and go wireless!

2

Fast and reliable flash sync

Air is one of the most reliable wireless systems available to sync your flashes with your camera. It is extremely fast and will provide a perfect flash sync down to the fastest X-sync speed of your camera. If you are using Profoto Air flashes, no external receiver is required. If other flashes are used, connect an optional Air Remote or Air Sync transceiver to your flash and set it as receiver.

3

Remote camera trigger

With a wide range of optional camera release cables, Air Remote and Air Sync transceivers can be combined to trigger cameras from afar. Cables for most cameras are available.

4

A wireless system with a wide range of options

Air Remote is an integrated part of a wide range of Air products. The range of products within the system comprises camera transceivers, accessory cables and software solutions. All designed to offer a better wireless solution for professional photographers. More info is available at profoto.com.
